

Sweet Street eliminates GMOs from its product portfolio

As of 2016, Sweet Street Products, Inc. has eliminated GMO ingredients from its product portfolio. In fact, actually all of the company's offerings are now non-GMO. The few exceptions are products that feature "branded candy" from other manufacturers.

Sweet Street's commitment to baking cleaner, more wholesome desserts began over 10 years ago, when the company began to notice hidden preservatives and additives in many of the ingredients it sourced. Sweet Street then decided to take back control of ingredient integrity and quality—while matching taste, texture and function on over 300 desserts featuring 500+ ingredients.

Blueberry Oat Pullman

A major milestone for Sweet Street came in 2016 with the introduction of the company's Manifesto[®] line of cookies and bars. All Manifesto[®] products are non-GMO and made without artificial colors and flavors—and each batch starts with all-butter dough, pure cane sugar and only cage-free eggs.

Today, new products continue to expand Sweet Street's portfolio of cleaner, more wholesome offerings. One example is the Farmer's Market Blueberry Oat Pullman. Full of fresh Maine blueberries, yogurt, and rolled oats it's also non-GMO and contains no artificial colors or ingredients.
